RAMADA OR SUN SHADE

Attached is a sketch of a ramada or sun shade that might be constructed in certain BLM recreation sites. A model installation has been contructed and detailed drawings and specifications are available in the Washington Office Division of Engineering.

The ramada is designed to provide shade over picnic tables without impeding airflow over and around people using the table. Removable louvered panels are provided for ease of maintenance and winter storage if necessary.

The shelter could be constructed with treated and laminated wood or marine plywood.
